Database :

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        멂
                                                   The invention relates to nucleic acid sequences that encode heparanase enzymes having endoglucuronidase activity. Recombinant heparanases are capable of removing the HS side chain from heparan sulfate proteoglycan (HSPG). Sulfated oligosaccharides, sulphonates or HSPG can be used to inhibit heparanase, this is useful for treatment of a physiological or medical condition associated with elevated heparanase activity, such as metastasis, angiogenesis, wound healing, angioplasty-induced restenosis, arteriosclerosis, atherosclerosis and inflammation. The human, murine and rat heparanases can be used to enhance wound healing, especially associated with tissue development and repair. The conditions mentioned above can be diagnosed using specific antibodies, and also using primers and probes specific for the heparanase polynucleotides. Other uses of the heparanases include sequencing sulfated molecules such as HSPG. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Heparanase; endoglucuronidase; heparan sulfate proteoglycan; enzyme; metastasis; angiogenesis; wound healing; angioplasty-induced resteno arteriosclerosis; atherosclerosis; inflammation; tissue development;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                      The invention relates to an antisense oligonucleotide (ASO) comprising a CC polynucleotide or a polynucleotide analogue of at least 10 bases being CC hybridisable in vivo, under physiological conditions, with a portion of CC arealytic activity. Also included are method of in vivo downregulating CC heparanase activity (comprising administering the ASO in vivo), a method of treating a subject suffering from a pathological condition (c) characterised by heparanase activity, comprising administering the ASO in vivo), a method CC (characterised by heparanase activity, comprising administering ASO to the subject), a pharmaceutical composition comprising the ASO and a CC carrier, an antisense nucleic acid construct (comprising a promoter CC sequence and a polynucleotide sequence directing the synthesis of an CC carrier, and antisense conditions, with a polynucleotide strand encoding a CC contisense RNA sequence of at least 10 bases being hybridisable in vivo, compression to the conditions (comprising administering in vivo the compression the activity (comprising administering in vivo the antisense nucleic acid construct and a carrier, and an composition the antisense nucleic acid construct and a carrier, and an activity comprising the synthesis of an antisense nucleic acid construct and a carrier, and an activity comprising the antisense nucleic acid construct and a carrier, and an activity comprising the composition composition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New antisense oligonucleotide hybridizable with a polynucleotide encoding a polypeptide with heparanase activity, useful for treating diseases such as cancer and autoimmune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI; 2004-070610/07.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         08-NOV-1999;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   31-AUG-1998;

The methods and compositions of the present invention are useful for the prevention and/or treatment of diseases or conditions associated with aberrant heparanase activity, as heparanase-dependent cancer, cancer, autoimmune reaction and inflammation. The gene for human heparanase is located on chromosome 4 The present sequence is a human heparanase protein.

The heparanase (hpa) polynucleotide is useful in gene therapy, particularly in treating tumour, inflammation or autoimmunity. Particularly, the polynucleotide is useful in modulating the bioavailability of heparin-binding growth factors, cellular responses to heparin-binding growth factors (e.g. bfGF) and cytokines (e.g. interleukin (II)-8), cell interaction with plasma lipoproteins, cellular susceptibility to certain viral and some bacterial and protozoa infections, or disintegration of neurodegenerative plaques. The polynucleotide is also useful in wound healing (e.g. thermal, chemical or radiation burns), and in the treatment of angiogenesis, restenosis, atherosclerosis, inflammation, neurodegenerative diseases (Gerstmann-straussler Syndrome or Creutzfeldt-Jakob disease), and some viral,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human
                                                                                                                                                                                                                                                                                                                                    The present invention relates to methods and compositions for inducing and/or accelerating wound healing via the catalytic activity of heparanase. The invention is used to induce or accelerate a healing process, particularly of an ulcer, burn, laceration, surgical incision, necrosis, pressure wound, diabetic ulcer and to induce or accelerate angiogenesis. The present sequence is human SK-hepl protein.

                                                                                                                                      Query Match
                                                                                                                                                                                                           The specification describes a polypeptide having heparanase (hpa) activity. The recombinant protein is used as a modulator of heparin-binding growth factors, cellular responses to heparin-binding growth factors cellular responses to heparin-binding growth factors and cytokines, cell interaction with plasma lipoproteins, cellular susceptibility to viral, protozoal and bacterial infections or disintegration of neurodegenerative plaques. Heparanase may be useful for conditions such as wound healing, angiogenesis, restenosis, athersclerosis, inflammation, neurodegenerative diseases, and viral infections. Mammalian heparanase can be used to neutralize plasma heparin, and anti-heparanase antibodies may be applied for immunodetection and diagnosis of micrometastases, autoimune lesions, arrenal failure in biogsy specimens, plasma samples, and body fluids. The

                                                                                                                            The present invention relates to a transgenic non-human animal whose genome comprises an exogenous polynucleotide sequence, including a promoter active in tissues of the non-human, a region encoding a human heparanase, where the promoter and the region encoding human heparanase is expressed in at least a portion of the cells of the non-human animal. The methods and compositions of the present invention are useful for the production of transgenic animals expressing heparanase, the used as models for human diseases such as cancers, viral infection, restenosis, neurodegenerative diseases, atheroselerosis and pulmonary disorders. The present sequence is human hpa protein used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                             New transgenic non-human animal expressing heparinase, useful as models for human disease, such as cancers, viral infection, neurodegenerative diseases, restenosis, atherosclerosis and pulmonary disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Zcharia E,

The invention is used to induce or accelerate a healing process, particularly of an ulcer, burn, laceration, surgical incision necrosis, pressure wound, diabetic ulcer and to induce or accelerate

                                                                                                                                                                  Catalytic activity. Also included are a method of in vivo downregulating conference activity. (comprising administering the ASO in vivo), a method conference and a subject suffering from a pathological condition conference activity. (comprising administering the ASO in vivo), a method conference activity a subject suffering from a pathological condition conference activity. Comprising administering ASO to contriber, an antisense nucleic acid construct (comprising a promoter conference and a polynuclectide sequence directing the synthesis of an antisense RNA sequence of at least 10 bases being hybridisable in vivo antisense RNA sequence of at least 10 bases being hybridisable in vivo conference and a polynucleotide sequence directing the synthesis of an accompany of an entod of in vivo conference and having heparanase catalytic activity), a method of in vivo conference antisense nucleic acid construct; a pharmaceutical composition comprising the antisense nucleic acid construct and a carrier, and an composition of at least 10 bases being hybridisable in vivo; under comprising the antisense nucleic acid construct and a carrier, and an composition of a polynucleotide strand being characterised by forming at least a portion of a polynucleotide strand being construct. The methods and compositions of the present invention are useful for the prevention and/or treatment of diseases or conditions associated with aberrant heparanase activity, such as per analysis activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           31-AUG-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ś
                     The invention relates to an isolated avian and reptile nucleic acid, encoding a polypeptide with heparanase catalytic activity. The signal peptide of the nucleic acid can be used to express membrane-associated secreted proteins in heterologous expression systems. The encoded polypeptides can be used to prevent tumour angiogenesis, metastasis and invasion, and to intervene with pathologies associated with impaired heparin-binding growth factors, cellular responses to heparin-binding
                                                                                                                                                                                                                                                                                                                 Nucleic acid encoding avian and reptile heparanase polypeptide is to treat various heparin-related disorders and the signal peptide useful in production of membrane-targeted or secreted recombinant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Heparanase; catalytic; cytostatic; antiviral; antibacterial; enzyme; anti-protozoan; neuroprotective; heparin; human.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes heparanase-specific molecular probes, useful for methods of detecting heparanase in situ. The probes and antiheparanase antibodies are used to detect or quantify the expression of heparanase, for diagnosis and monitoring of diseases (especially tumours, (adeno)carcinoma; squamous cell carcinoma, teratocarcinoma, mesothelioma, melanoma, lymphoma or leukemia, a solid cancer (or its metastases) derived from liver, prostate, bladder, breast, ovary, cervix, colon, skin, intestine, stomach, uterus and pancreas, kidney disease, diabetes and inflammation, haemorrhagic nephritis, nephrotic syndrome, sepsis and inflammatory or autoimmune disease), for targeted drug delivery (e.g. of anticancer agents) and as research reagents. The present sequence represents human heparanase, which is used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Heparanase-specific e.g. of tumors, and
